Jee Counselling AI ChatBot

Team: ChatBot

Chahat

Hemang Tailor

Tanishk Mamoria

AI chat bot which helps student in finding perfect college and branch according to their rank

How it works?

As a user, we have to provide it input as the rank we scored in Jee Mains and Advanced along with all the necessary information as category, gender, and state.

The chatbot will provide the list of college and branch they are getting according to their rank, category, etc.

Backend work:

We have connected the ChatopenAI to the Conversational Retrieval QA chain at chat model and for input we had given it the data of previous year in In-memory vector store with embedding to Conversational Retrieval QA chain at vector store retriever.

So, when we provide it with input. It processes the input within the data to find a suitable output according to the input provided.

Thank You
